“When I initially looked at the clear Wissmach 90®, I was concerned about the roughness on one side and felt that they might trap air. Boy, was I wrong!! Bubbling was not a problem. I made about a dozen pendants using various techniques and capped with the Wissmach 90®, and I was nothing short of ecstatic. The glass capped beautifully and created a very smooth surface without having to go too high in temperature.

The techniques I tried included screen printing, painting, Mica (both capped and on top), and dichroic glass. Everything I tried yielded a perfectly satisfactory result. In my opinion, the Wissmach 90® is far superior to the other glasses that I have used.”
